

THUNDER BEAST ARMS CORPORATION

MODEL 223A SUPPRESSOR

The model 223A is our full-auto suppressor for 5.56 mm NATO assault rifles. It is designed for extreme durability and high heat loads from full-auto and burst firing schedules. The 223A is ideal for short-barrelled rifle ("SBR") format fighting carbines and M4/M16 pattern rifles as well as AR-15's that will be used with a high rate of fire.

The 223A is made of 316 stainless steel and features a fully-welded baffle core for durability. It has a length of 6.8 inches, 0.4 less than the 223P, to keep over-all length of the carbine relatively short. Muzzle blast concussion is eliminated and the recoil impulse is reduced and smoothed over time. The 223A improves the accuracy of most rifles. It is sealed and requires no maintenance.

The 223A is ideal for fighting carbines including full-auto applications.

Caliber	.223 caliber, 5.56 mm NATO
Material	316 Stainless Steel and Inconel
Dimensions	6.8" [length] x 1.5" [diameter] 25 ounces
Threads	1/2-28 (US Standard)
