

THUNDER BEAST ARMS CORPORATION

MODEL 30BA SUPPRESSOR

The model 30BA is the brake-attached version of our flagship long-range precision rifle suppressor. It offers best-in-class sound suppression levels in a very light weight format, and is built with accuracy as its first priority. The 30BA is designed to mount over our muzzle brake. It is particularly suited to applications where the rifle will be shot suppressed and unsuppressed, and a brake is desired when shooting without the suppressor.

We developed the 30BA and 338BA to meet the requirement that some customers have for a suppressor that mounts over a muzzle device. We haven't found a "quick mount" on the market that meets our accuracy and repeatability requirements, so we developed the BA series to mount over our brake and provide the same repeatability as our direct thread attach suppressors, like the 30P-1. The 30BA features a conical shoulder for rock solid POI repeatability and to make sure it never comes loose.

The 30BA is constructed of titanium with a fully-welded baffle core. This material and construction provides a great strength to weight ratio. It can take whatever your precision rifle can dish out.

Caliber	.30 caliber, up to .300 Winchester Magnum
Material	Silencer - Titanium, Brake - Hardened Stainless Steel
Dimensions	9.0" [length] x 1.5" [diameter] 15.9 ounces
Threads	1/2-28, 5/8-24, 3/4-20, 3/4-24, 3/4-28, M18x1.0, M18x1.5
Finish	Black (standard), OD Green, or Coyote Brown CeraKote
Use	Precision/Long-range rifle, bolt or semi-auto
Price	\$1245 Extra brakes \$135/ea
