

THUNDER BEAST ARMS CORPORATION

MODEL 30P-1 SUPPRESSOR

The model 30P-1 is our flagship long-range precision rifle suppressor. It offers best-in-class sound suppression levels in a very light weight format and is built with accuracy as its first priority.

The 30P-1 was designed around .308 for maximum flexibility and is rated up to .300 Winchester Magnum, but it's the ideal suppressor for the most competitive mid-sized cartridges for long-range shooting such as .243 Winchester, .260 Remington, 6.5 Creedmoor, 6.5x47 Lapua, 6.5-284 Norma, and 7mm Remington Magnum & WSM.

The 30P-1 is constructed of titanium with a fully-welded baffle core. This material and construction provides a great strength to weight ratio. It can take whatever your precision rifle can dish out.

The new 30P-1 model is quieter and stronger than the original 30P.

The 30P-1 is ideal for: long-range practical competition shooters; varminters; predator hunters; precision tactical shooters.

Caliber	.30 caliber, up to .300 Winchester Magnum
